PROFESSIONAL SUMMARY

Systems Engineering student specializing in DataOps and integration architecture. Proven experience designing ETL pipelines, orchestrating APIs, and deploying AI models to optimize business processes. Demonstrated ability to reduce operational times by 80% through efficient architectures (Serverless, ZTNA) and automation tools (n8n, Python, Power Query), tailoring complex technical solutions to client constraints.

TECHNICAL SKILLS

Cloud & Infra: GCP, Huawei Cloud (ECS, OBS, FunctionGraph), Proxmox, Docker/LXC, FinOps, ZTNA, Cloudflare Tunnels.

DataOps & DBs: n8n, Python, Power Query, Power BI, SQL (MySQL/PostgreSQL), SAP ERP, REST APIs, WordPress Architecture.

AI & Automation: Local LLM Deployment, Prompt Engineering, Text-to-SQL, Apify (OSINT), OpenRouter, Firebase.

PROFESSIONAL EXPERIENCE

Castrol (BP) | Mexico City

September 2024 – September 2025

CVO Intern (Data & Strategy) / Regulatory Affairs Intern

- **ETL Automation:** Automated an Extract, Transform, Load (ETL) pipeline using Power Query to ingest flat-file exports from SAP ERP. Eliminated manual consolidation, reducing report generation time by 80% (from days to <5 hours/week).
- **Business Intelligence:** Architected a dynamic Power BI dashboard for 15+ users. Developed monthly sales forecasting models with a sustained +/- 15% accuracy, optimizing supply chain and preventing stockouts.
- **Compliance & SAP:** Managed the procurement cycle for certification services via SAP Fiori and validated 15+ key products against Mexican Official Standards (NOM-050, NOM-030).

Huawei Cloud | Mexico City

(Month/Year) – (Month/Year)

Cloud Architecture & Support Intern

- **FinOps Architecture:** Designed POCs for Enterprise clients, achieving estimated 35% reductions in compute costs through right-sizing and Serverless container architectures.
- **Serverless SIEM Integration:** Orchestrated audit log ingestion to Splunk and Wazuh using FunctionGraph. Implemented batch processing via OBS triggers, mitigating cold starts and reducing API invocation costs.
- **Incident Management:** Coordinated technical ticket resolution (OSM) based on SLAs, translating complex architectures (NFV/SDN) into business terms for non-technical stakeholders.

SELECTED PROJECTS

- **AI-Driven Cybersecurity Analysis Pipeline:** Designed a data integration system to analyze real-time network traffic. Deployed local LLMs on GCP compute instances to process telemetry. Automated the generation of custom reports and email drafts via a *Human-in-the-loop* workflow, increasing analysis throughput and reducing cognitive load.
- **Secure Text-to-SQL Assistant (Huawei Cloud):** Developed a generative AI architecture (Llama 3.1) to query relational databases using natural language. Ensured security (0% SQL injections) by applying RBAC (*SELECT-only* credentials), query parameterization, and validation guardrails.
- **Custom CRM System for NGO "Mi Valedor":** Developed a custom CRM plugin on WordPress to bypass external infrastructure costs. Automated the linking of sales and events to dynamic profiles via PHP Hooks and CPTs, implementing RBAC to protect sensitive data (PII). Saved an estimated 10-20 administrative hours per week.
- **Zero Trust Homelab & n8n Orchestration:** Virtualized services using Proxmox VE (LXC/Docker). Implemented ZTNA architecture via Cloudflare Tunnels and Nginx Proxy Manager, eliminating local port exposure. Deployed n8n workflows for B2B automation (OSINT via Apify), managing API rate limits and DNS records to prevent spam filtering.

EDUCATION

Universidad Iberoamericana | B.S. Computer Systems & Telecommunications Engineering

Expected: May 2027
